

Barcode scan : the mini USB key

Total: €192.00

Unit: The USB key

- The world's smallest 1D player
- Can stock up to 50,000 scans
- USB or Bluetooth interface
- Suitable for small inventory

Discover our barcode scan: the mini USB key, the smallest handheld CCD reader in the world. You will be able to carry it everywhere with you without being cluttered and scan all your barcodes very easily.

Barcode scan features: the mini USB key

One scan is equivalent to one line, each time you scan a product, **it will create one line even if you re-scan the same code**. Note that it will not put the quantity in stock next to the scan, but the number of lines read.

The barcode scan is a high quality product, its **easy installation and small size** (42 x 18 x 13 mm) makes it stand out, so it is very practical to use in your daily life.

Our barcode scanner is **resistant due to its black polycarbonate composition and has a reading width of up to 60 mm**. Equipped with a red LED light of 625 m you will be able to read visible barcodes. Its **reading speed is 240 scans per second**.

This barcode reader will be **able to read the following different codes** : UPC-A/UPC-E, EAN-8/EAN-13, 2 parmi 5 industriel, Codabar, Matrix 2 of 5, Code 11, Code 93, Code 32, Code 128, Standard Code 39, Full ASCII Code 39, 2 parmi 5 entrelacé, China Postal

Code, MSI Plessy Code, UK Plessy Code, EAN/UCC 128, Telepen Code, IATA Code, GS1 Databar (RSS)-14, RSS-Limited, RSS-Expanded.

This barcode reader will scan any barcode labels without any problems. An audible and light signal of good reading is triggered once you have scanned the barcode.

This barcode scanner can read 21 recognised 1D code types and is compatible with Windows, Apple iMac, Android and Linux.

The two versions of our barcode scan are available

Please note that there are two versions of our barcode scanner: the wired and Bluetooth version.

- **The wired version**

Its removable 1.50m cable gives you a convenient margin of manipulation and power is supplied directly through the port. To use your drive correctly, you must connect it directly to your tablet or computer. Once you have pressed to scan your barcode, the data is sent directly line by line. The use of this barcode scan is **recommended for sales people** to put on their shelves, to be used in libraries and media libraries.

- **The Bluetooth version**

The Bluetooth version is slightly larger but has the same features as the previous version. This barcode USB key stores your **scans in memory**.

It is more adapted to carry out your **small inventories during the year and rotating inventory** thanks to its 10 m range. Moreover, it can be set in the following way: barcode / date / month / year (Anglo-Saxon) and it will keep in memory up to 50 000 lines.

This version can be ideal for field sales representatives who go to large supermarkets for small inventories, for example...

It will be delivered with its USB cord and wrist strap for an easy use in your daily life.
