

Key for USB blocker Type A

Total: €37.00

Unit: the key

- Blocks access to a USB-A port
- Available in 5 colors
- Reduces the risk of leakage
- Easy to use

This key allows you to install and remove a blocker on a USB port to prevent users from plugging in any USB cable or plug and thus prevent data leakage.

The advantages of having a USB blocker

The USB blocker is an ideal solution to protect and quickly block access to USB ports. The USB blocker reduces the risk of data loss, leakage, unauthorised downloading and copying of content. In addition, it is a physical solution, which means that it can be used correctly without downloading software or using additional equipment.

Instructions for use of the USB blocker and the key

You need to **insert the blocker** into a USB port and then release the latch. After installation, it is practically impossible to access the USB port of the computer, thus protecting computer data or the introduction of a virus. **You must have the key, of the right colour, to be able to remove the blocker.** Please note that the key of a colour only opens blockers of the same colour. For example, the red key only opens the red blockers.

This key completes our [pack of 10 USB-A blockers](#). **Please note:** you must use the **same colour** key as the blockers for this to work.
