

# 3M Heavy Duty Adhesive Polyester Machine Plate - 75x40mm

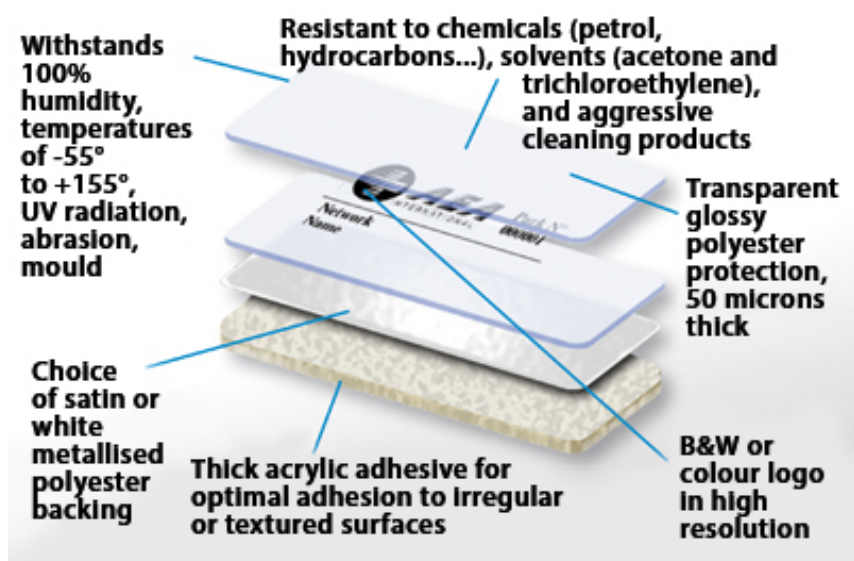

Total: €594.00

Unit: the roll of 1000

- Flexible label
- Protected Information
- Manual removal difficult
- Very high quality

The best in terms of nameplate, also called laser label. Used particularly within industries, this polyester nameplate will provide constant or variable information for a long time (serial number, technical data, standards, CE logo...) which will be perfectly protected by a thick layer of bright transparent polyester.

Its 3M double thickness acrylic adhesive gives **your identification plate** an **excellent hold on various surfaces** (including rough surfaces) and in most harsh environments (humidity, high temperatures, freezing, common solvents, high pressure cleaning, kitchen, laboratories, industrial, etc.).

**The manual removal of the laser label is thus very difficult.**

### **The nameplate: a very resistant laser label**

The polyester nameplate offers a very good resistance to shock, compression, and wear, and is also very resistant to many common solvents and UV which makes it a **nameplate that withstands the test of time**. This nameplate has a **very high digital printing quality** (similar to silk-screen printing) and ultra-resistant.

*A processing fee is charged only for the first production. Delivery of the laser label within 2 weeks after a press proof approval. For other formats, contact us.*

Like these ownership plates, we offer yet another [a tamperproof plate](#) that ensures secure labeling of your property or a [manufacturer plate](#) made of anodised aluminium that is resistant to time and impact. To find out more about builder's plates, please see our article [here](#).
