

Ares plastic warranty seal with metal insert

Total: €101.00

Unit: the pack of 1000

- Security seal with progressive tightening
- Ideal for identifying your goods and products
- Adjustable flat plastic stem
- Metal locking mechanism
- Customization (logo, EAN, barcode, QR-code)
- Thermodigital printing : Black and white
- Tensile strength: 215N

Featuring an adjustable flat plastic pin and metal locking mechanism, the Ares Warranty Seal is unbeatable in its class. Ensuring the authenticity of your items has never been more reliable and durable than with the Ares plastic warranty seal with metal insert.

Two sizes of seals to best suit your needs

The Ares plastic seal is mainly used to dissuade any attempt of fraud, theft or break-in, but also allows the authentication of your products and goods of any kind. Its smooth stem coupled with its metallic insert, make this adjustable Ares plastic seal one of the most efficient on the market. The standard model of the Ares plastic seal has a hole for a label holder. The metal locking mechanism makes it more difficult to open manually.

Dimensions	Ares Court	Ares Long
Length	315 mm	427 mm
Max width	21,8 mm	21,8 mm
Printing area		33 x 18 mm
Stem diameter		2 mm

The Eracle, Ares and Efesto series vary only in tubular diameter.

The Ares Guarantee Seal made of plastic with metal insert has a desired optimum tensile strength of 215N.

What is a warranty seal ?

There are many different types of seals for different purposes. These uses have a direct impact on **the shape, the material or the stem of the seal**. In this sense, a security seal will be fundamentally different from a warranty seal.

The difference between these two types of seals lies in the use you wish to make of them. Indeed, securing a product or an asset is different from ensuring its authenticity. So, before buying a seal, ask yourself the following question: **What will I use it for ?**

Here, being a warranty seal, its primary use is to **guarantee the authenticity of products or goods** and/or to prove its undue manipulation.

In order to obtain more precision concerning the different types of seals, we have written an article about : [Which security seal for which use?](#)

How do I use the Ares warranty seal ?

Like padlocks, seals also have different ways of closing. Some are sealed from the front, others from the back, or with a lead.

Here, the Eracle warranty seal is one of those that **seals from the back**. So all you have to do is hold the head of the seal firmly with one hand and the stem with the other.

A simple pull, once inserted into the **metal locking mechanism**, will suffice, in order to engage the smooth rod.

To break the seal, you have two choices:

- **Manually** : This warranty seal has a metal locking mechanism, which gives it an unbeatable resistance. Breaking it manually can be more complicated than expected and requires some pulling force;
- **Using scissors** : clean cut.

It is recommended to personalize the seal with a serial number, in order to further guarantee the security and identification of your property. This way, if a third party breaks the seal or replaces it, it will be easy for you to determine the theft or the break-in.

It is to be noted that our seals are provided with a specific numbering to each one, as well as with the mention "sealed" in order to ensure an optimal and maximum safety!

What are the different uses of plastic seals?

Ares is an adjustable plastic warranty seal. The closing mechanism includes a very thin metal block that strengthens the product and makes it difficult to open manually. It is used in many fields because of its structural simplicity and robustness. Made entirely of plastic, it is economical and fully recyclable.

The area of mail delivery : The Ares plastic warranty seal with recyclable metal insert allows the closure of plastic containers with lids and the closure of bags containing letters and boxes.

The medical field : It is not uncommon to see an Ares plastic seal on cabinets containing hazardous drugs or narcotics. This guarantee seal is regularly used for the control of food and care carts during the whole transport, from production to the place of final consumption.

The chemical and food industry : The plastic seal of guarantee is very present in this industry in order to identify for example the origin of a ham, to close a complete product (bag of mussels) or for reasons of logistics and transport for external use.

The banking sector :The Ares plastic guarantee seal with metal insert is commonly used to safeguard important documents, meal or fuel vouchers, keys, but also to seal payment station bags such as coffee machines or self-service machines.

Le domaine de la mode et du E-commerce : To ensure that the product ordered has not been used or consumed, it is common to attach a warranty seal.

What are the customization options for the Ares seal ?

At SBE Direct, we are committed to customer satisfaction. We believe that customer satisfaction is achieved through **products that look like you**, to the image of your company. In this sense, we wanted the customization to be as complete as possible.

Also, we offer you the choice of three sizes of Eracle warranty seal in recyclable plastic:

- **Ares Court :**

- **Ares Long :**

Personalization by **strip printing**, guarantees exceptional printing, we use **permanent ink** by **anti-wipe thermal transfer**. This way, we can guarantee a **quality and durable print**. (It should be noted that this type of printing is done in black or white).

It will be possible to inlay what you wish to see appearing on the head of the seal (green insert on the diagrams), whether it is :

- **A logo,**
- **A serial number,**
- **A barcode,**
- **A QR code.**

Concerning the general visual aspect of your plastic warranty seal, we offer more than 12 different colors:

Advanced customization options :

At SBE Direct, we try to provide the most comprehensive offerings possible. The Eracle plastic security seal with metal insert is eligible for several options. That's why we offer:

- **To enlarge the text area (green areas) in order to push the customization as far as possible,**
- **To add an easy opening in order to be able to break the seal manually under any circumstances,**
- **To add a clip.**
